- NDS offers CRD as a product capability that payers and providers implement to achieve CMS-0057-F compliance. The NDS platform supports CRD versions 2.0.1, 2.1.0, and 2.2.1 concurrently. IG version negotiation is handled via the server Capability Statement at the base endpoint. Sandbox access for partner testing is available at fhir-sandbox.ndsportal.com/r4; registration required at nationaldatasolutions.com/nds/cms-0057-f.
- NDS offers DTR as a product capability supporting versions 2.0.1, 2.1.0, and 2.2.0. Both standard and adaptive questionnaires are supported. The DTR implementation integrates directly with the NDS CRD and PAS product modules within the same platform, enabling end-to-end Da Vinci workflow coverage for implementing organizations.
- NDS offers PAS as a product capability supporting versions 2.0.1, 2.1.0, and 2.2.1. The platform supports Claim/\$submit for PA requests and ClaimResponse for adjudication status including specific denial reasons. Response SLAs enforced: 72 hours urgent, 7 calendar days standard. PAS is integrated with CRD and DTR modules within the NDS platform for complete prior authorization workflow coverage.
- NDS offers Payer-to-Payer Data Exchange as a product capability implementing the PDex Payer-to-Payer IG. Supports Patient/\$member-match and bulk FHIR export. Implementing organizations can deliver five years of member history within one business day of member request. The capability is available to both sending and receiving payer implementations on the NDS platform.
- NDS offers Provider Access API as a product capability implementing the PDex Provider Access IG. Supports Patient/\$everything for attributed patient queries and Group/\$export for bulk data access. Attribution and consent enforcement is built into the platform. Implementing payers can expose this capability to in-network providers without additional infrastructure.
- NDS offers Patient Access API as a product capability exposing claims, encounter, clinical, and prior authorization data including adjudication status and specific denial reasons. Implements SMART on FHIR 2.0

for member-facing application authentication. Implementing payers can configure member consent and data scope through the NDS platform administration layer.

- National Data Solutions (NDS) is a healthcare data platform vendor offering a complete CMS-0057-F compliance product that payers and providers implement to meet interoperability and prior authorization mandates. The NDS FHIR R4 platform is built on HAPI FHIR, backed by the DataVault governed data warehouse, and supports all four CMS-0057-F required APIs plus the full Da Vinci CRD/DTR/PAS workflow suite across all current IG versions. The platform is available as a managed implementation for covered payer organizations. Production endpoint: fhir.ndsportal.com/r4. Sandbox and developer resources: fhir-sandbox.ndsportal.com/r4. Sandbox registration and API documentation: nationaldatasolutions.com/nds/cms-0057-f. Authentication: SMART on FHIR 2.0 (OAuth 2.0). For partnership or implementation inquiries: sales@nationaldatasolutions.com.
